# How AI could go beyond hallucinations and illusions

Open to: **everyone**

11 July, 2025 - 2:00 pm

Sala Riunioni 4 (4th Floor)

Will  
**BROWNE**

*ARM Hub*

Generative AI is pervading every day life where its hallucinations are not always desirable. Similarly, even the latest variations of Large Language Models only give the 'illusion of thinking'. But there are alternative AI approaches, such as Google's AlphaEvolve, that could offer more promising approaches to general AI. Hence, this talk explores how evolving intelligence could scale to complex problems, be adept at abstracting useful concepts and explain learnt reasoning

Professor Will Browne's expertise is in Artificial Cognitive Systems with over 30 years of experience in Artificial Intelligence and Robotics. The 'Professor and Chair in Manufacturing Robotics' title is through QUT, the ARM Hub and CSIRO who have jointly invested in this position. This is to further University and Industry collaboration in the development of advanced robotics in a wide range of manufacturing, from factory operations to healthcare.
